## IMPORTANT NOTICE

**Badminton Club Kungota** has partnered this year with the specialized store **Loparji.si** and the renowned brand **Victor** to support further development and raise the quality of play. The purpose of this cooperation is to allow players to test new solutions that can have a significant impact on progress in world badminton.

As part of the tournament, we will for the first time be testing the hybrid shuttlecocks **Victor NCS PRO**, which represent a modern compromise between durability, flight stability, and consistency of impact. These shuttlecocks were developed as an innovative alternative to traditional feather and plastic models, with the aim of improving playing conditions and reducing fluctuations in quality. Their use gives players the opportunity to experience the most advanced materials and technologies currently entering the European market.

Because we want to organize the tournament **without additional costs** for participants and encourage the testing of new standards in badminton, the **cost** of using **Victor NCS PRO** shuttlecocks is **already included in the entry fee**. This means that competitors can focus fully on the game without concern, while also contributing opinions and feedback that will help guide the further development of both the shuttlecocks and the organization of tournaments in the future.
